Professional Summary

Results-oriented Mechanical Engineer with over 2 years of hands-on experience in managing metal recycling and industrial facilities. Expert in the maintenance and optimization of complex hydraulic systems, including industrial balers and heavy shears. Proven track record in enhancing production efficiency, reducing machine downtime, and leading technical teams in high-pressure environments. Certified in ISO 45001 (Health & Safety) and ISO 9001 (Quality Management), with a steadfast commitment to implementing rigorous HSE standards and operational excellence.

Experience

Aug
2023–Present

Field Mechanical Engineer, Ramallah Company for Steel Industry

- Lead and optimize daily operations for metal baling and recycling facilities, ensuring a seamless workflow and achieving a significant increase in production efficiency through strategic process improvements.
- Directly manage and troubleshoot complex hydraulic systems, including industrial balers and giant shears, reducing machine downtime by implementing a rigorous preventive maintenance schedule.
- Supervise and mentor a team of technicians and workers, fostering a culture of safety and high performance while maintaining strict HSE (Health, Safety, and Environment) standards.
- Analyze and resolve critical production bottlenecks, utilizing data-driven insights to prepare technical reports that aid in strategic decision-making and profitability growth.
 - Coordinate heavy equipment maintenance used in iron transport, ensuring all machinery is operational and compliant with safety inspection schedules.

Feb 2020–Oct
2022

Maintenance Engineer, Salama Factory for Cardboard Plates

- Ensured continuous operation of high-speed production lines by executing both reactive and proactive maintenance strategies.
- Developed and managed comprehensive periodic maintenance schedules, which significantly extended the lifespan of critical machinery and minimized unexpected failures.
